Lead Poisoning Persists in New York State

Lead can enter our bodies by breathing it in, or eating it.¹

Lead poisoning can affect children and adults

Biggest health concerns for kids:1

- Lowered IQ
- Developmental delays
- Learning disabilities
- Memory loss
- Hearing loss
- Attention deficits
- Hyperactivity
- Behavioral disorders

Eating or breathing dust from lead-based paint is the leading cause of lead poisoning in children¹

In adults:2

- Kidney, brain, and reproductive issues
- High blood pressure and heart disease

THERE IS NO SAFE LEVEL OF LEAD

NEW YORK STATE LEAD AND HOUSING FACTS

New York State has the oldest

housing in the country.3

~75%

of NY homes were built before 19784

That's ~5.5 million housing units built before lead paint was banned federally.4

3.9% of NY children tested have $5 + \mu g/dL$ blood lead levels — significantly higher levels and number of children than across the country: only 2.5% of US children tested have $3.5 + \mu g/dL$.5,6

Renters are in more danger:

In Buffalo, 80% of properties where children with elevated blood lead levels live are rentals.⁷

WHAT YOU CAN DO

- Is your home built before the '70s? Make sure it's been tested for lead
- Keep painted walls and trim in good repair
- Leverage government resources to test and replace lead in pipes, and address lead paint

WHAT GOVERNMENT SHOULD DO

- Ensure landlords and their insurance companies are accountable
- Take over enforcement of the federal Renovation, Repair, and Paint laws
- Require testing for lead before sales, and complete disclosure to renters

Lead Poisoning Persists in Syracuse

Urgent action needed on environmental justice crisis

City of Syracuse Vital Statistics

28.8% 1963

of Syracuse residents live below the federal poverty line—over double the rate in New York State (13.9%)

The year the typical house was built in Syracuse. NYS didn't ban lead until 1970, and the federal ban started in 1978.
